

Fast and Flexible Inference of Joint Distributions from their Marginals

Charlie Frogner and Tomaso Poggio

CENTER FOR

Machines

Existing work:

- Limited to **Bernoulli** marginals, or
- **relaxes** the problem, or
- relies on **approximate inference** by MCMC, or
- solves an **optimal transport** problem.

This work:

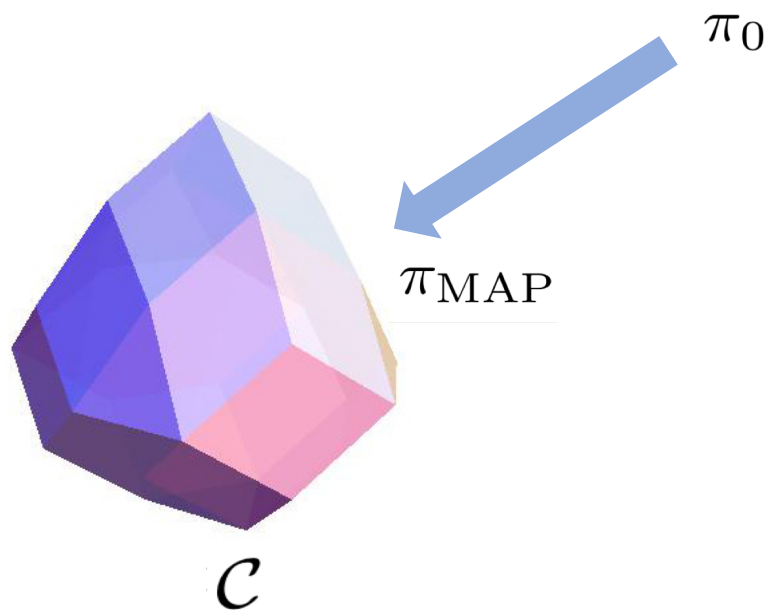

- **Unified framework** that includes **wide variety of priors** and some existing methods as special cases.
- Single **exact inference** algorithm.
- **Computationally efficient.**

MAP inference = Bregman projection

$$\pi_{\text{MAP}} = \operatorname{arginf}_{\pi \in C} D(\pi, \pi_0)$$
