

# Variational Mixtures of ODEs for Inferring Cellular Gene Expression Dynamics

Yichen Gu, David Blaauw, Joshua Welch

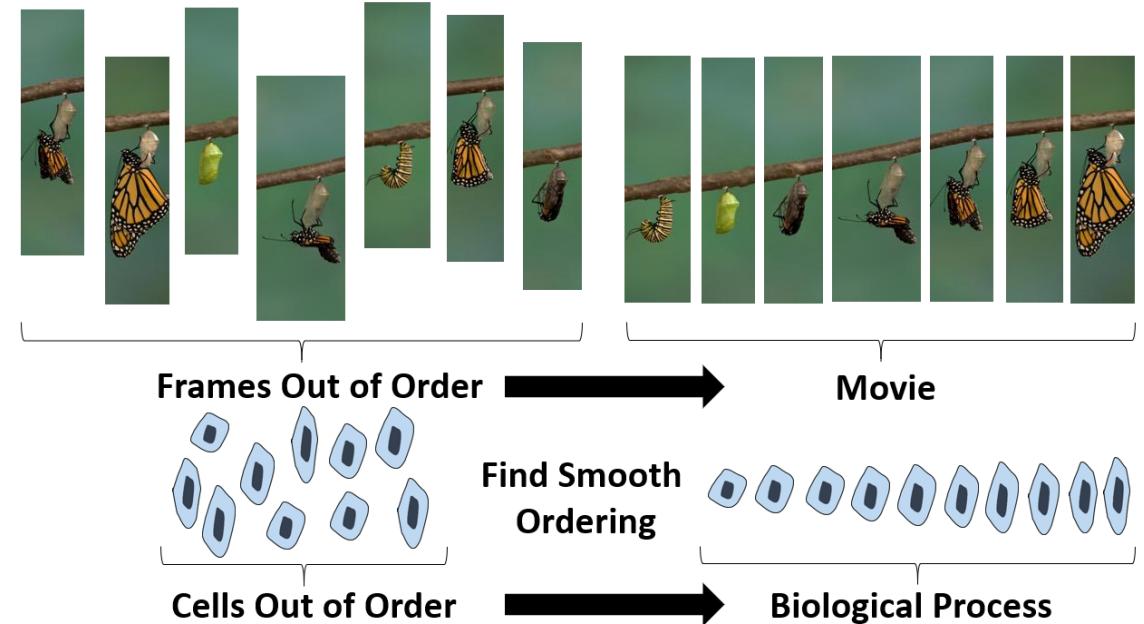

# Single-Cell RNA Sequencing

- Gene expression profiling at single-cell resolution.
- Cell-by-gene mRNA count matrix (snapshots)  $\mathbf{X}$ .
  - $X_{ij} :=$  mRNA count of the  $i$ -th cell and  $j$ -th gene
  - Cell time is unknown

# Problem Formulation

- Given: mRNA count matrices  $\mathbf{U}, \mathbf{S}$
- Assumptions
  - $\mathbf{U}, \mathbf{S}$  are generated by a system of ODEs plus noise
  - Temporal information is absent
  - Unique solution  $F(t; \boldsymbol{\theta})$  (Kinetic Functions)
- Goal
  - Infer the latent time,  $t$
  - Predict future states using  $F$

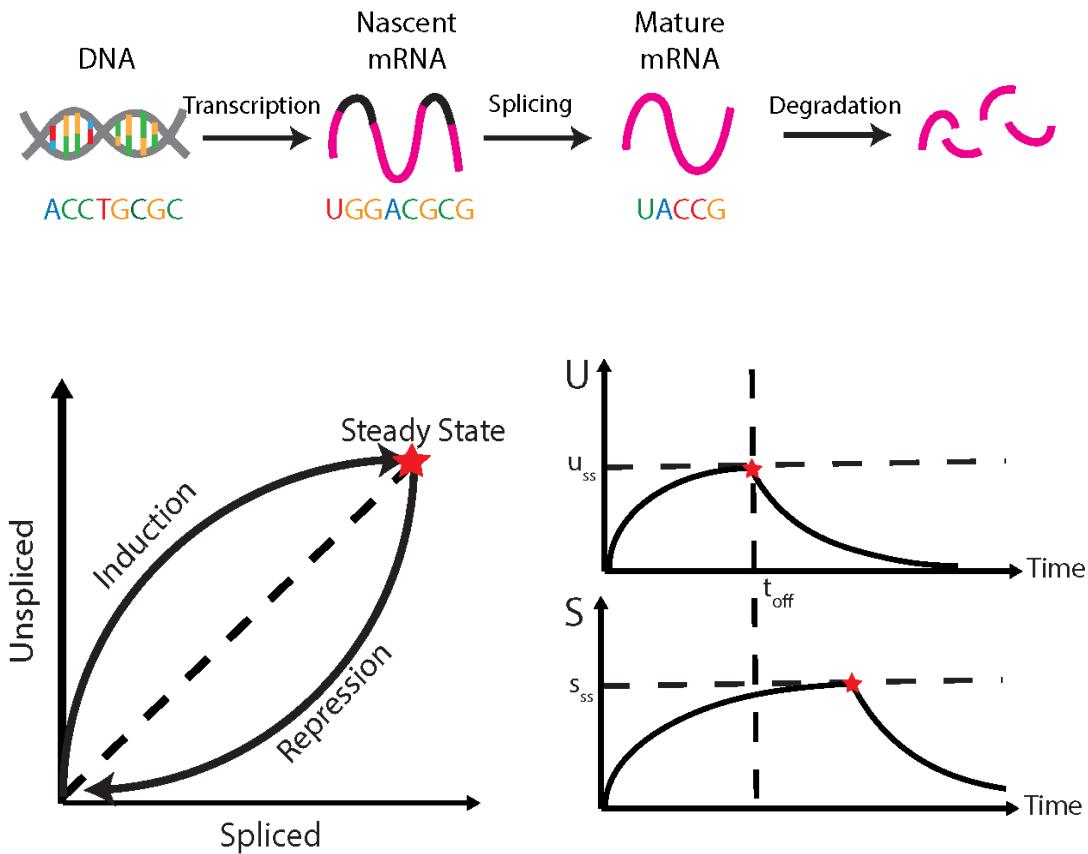

# RNA Velocity

- Key Observation: Splicing
- ODE Model

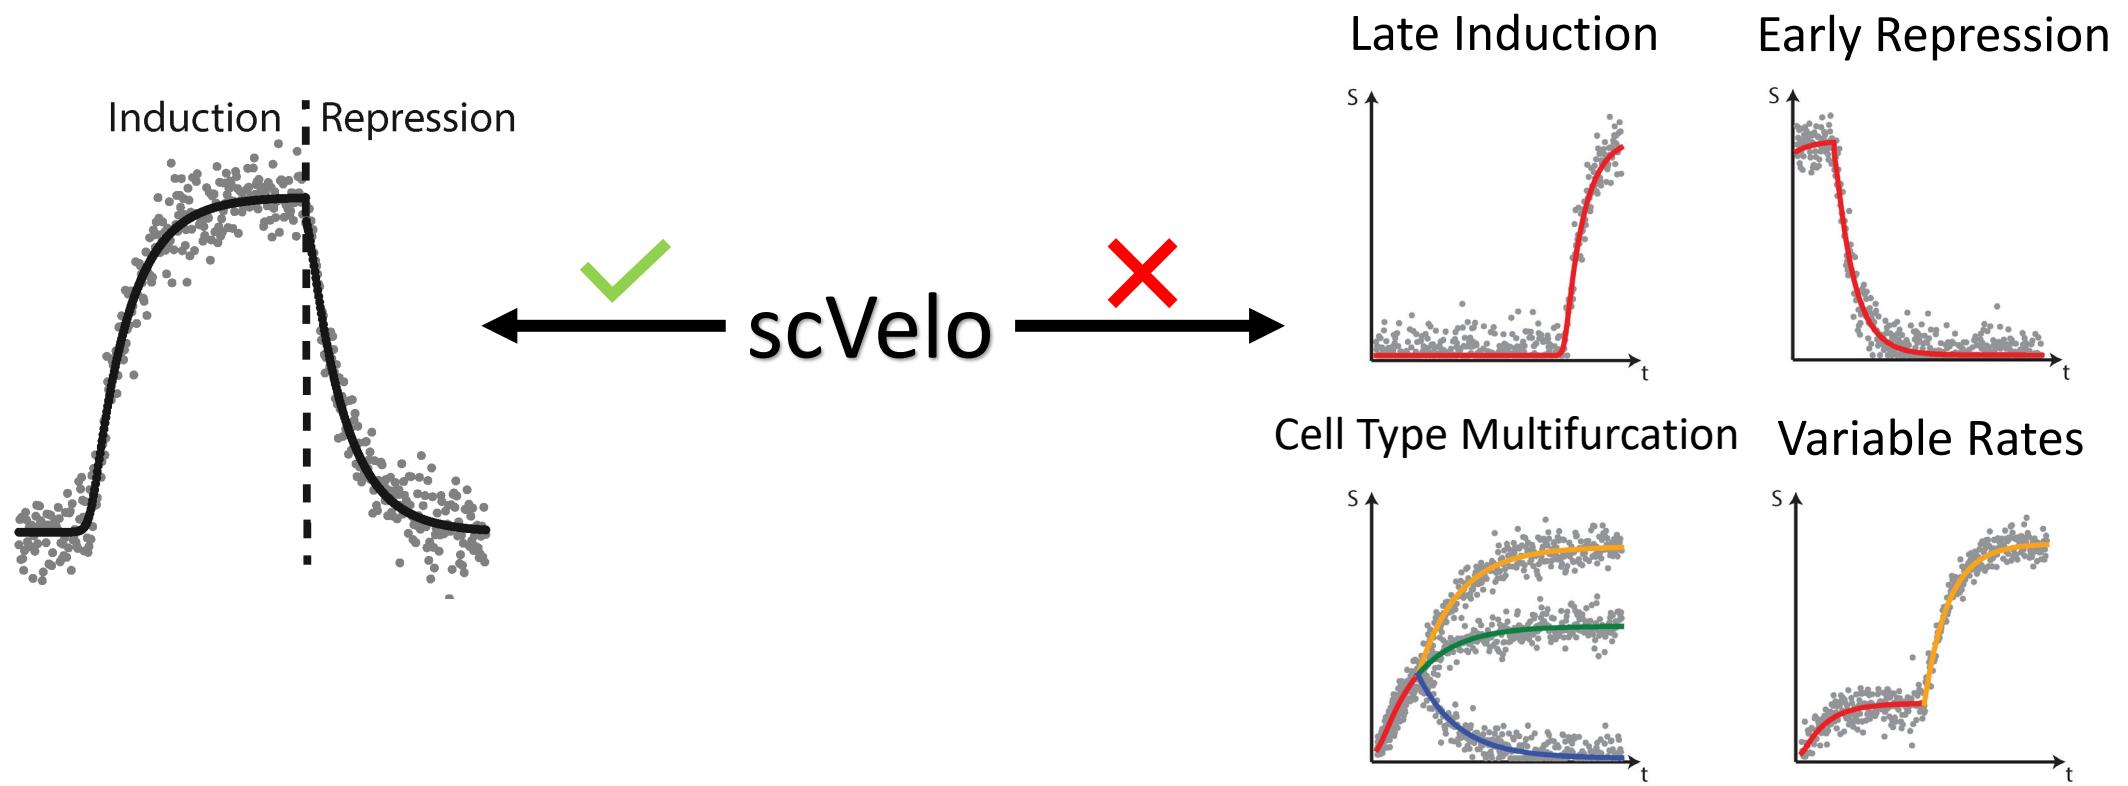

$$\frac{du}{dt} = \alpha - \beta u$$

$$\frac{ds}{dt} = \beta u - \gamma s$$

- RNA Velocity :=  $\frac{ds}{dt}$

# Limitations of the SOTA Method

# Variational Mixtures of ODEs

Inference Model

$$q_{\phi}(\mathbf{c}, t | \mathbf{x}) \sim N(h(\mathbf{u}, \mathbf{s}; \phi))$$

Generative Model

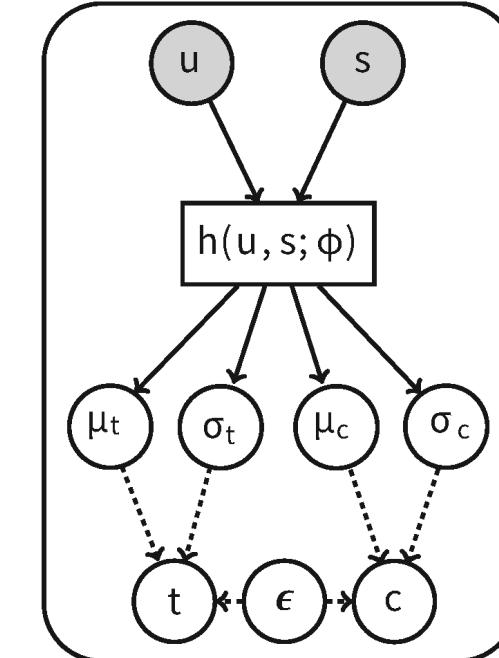

$$t \sim N(t_0, \sigma_0^2), \mathbf{c} \sim N(\mathbf{0}, \mathbf{I})$$

$$\boldsymbol{\rho} = g(\mathbf{c})$$

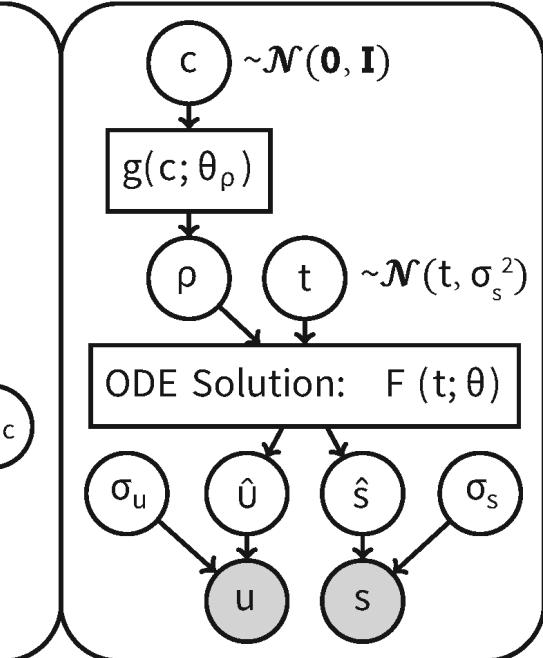

$$\tilde{\boldsymbol{\alpha}} = \boldsymbol{\rho} \odot \boldsymbol{\alpha}$$

$$\mathbf{x} \sim N(\mathbf{F}(t; \boldsymbol{\theta}), \boldsymbol{\Sigma}_r)$$

Inference Model

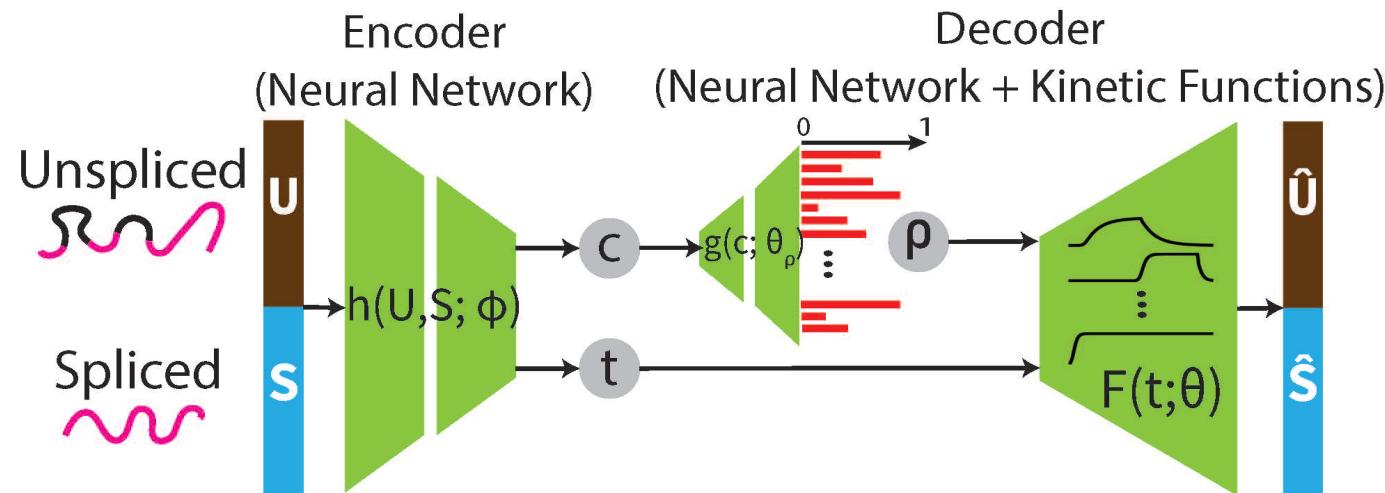

Generative Model

# VeloVAE

Training Objective – ELBO

$$\sum_{i \in B} \left[ -KL \left( q_{\phi}(\mathbf{c}, t | \mathbf{x}_i) || p(\mathbf{c}, t) \right) + \underbrace{\mathbb{E}_{q_{\phi}(\mathbf{c}, t | \mathbf{x}_i)} [\log p_{\theta}(\mathbf{x}_i | \mathbf{c}, t)]}_{\text{Approximated by Sampling}} \right]$$

# Results

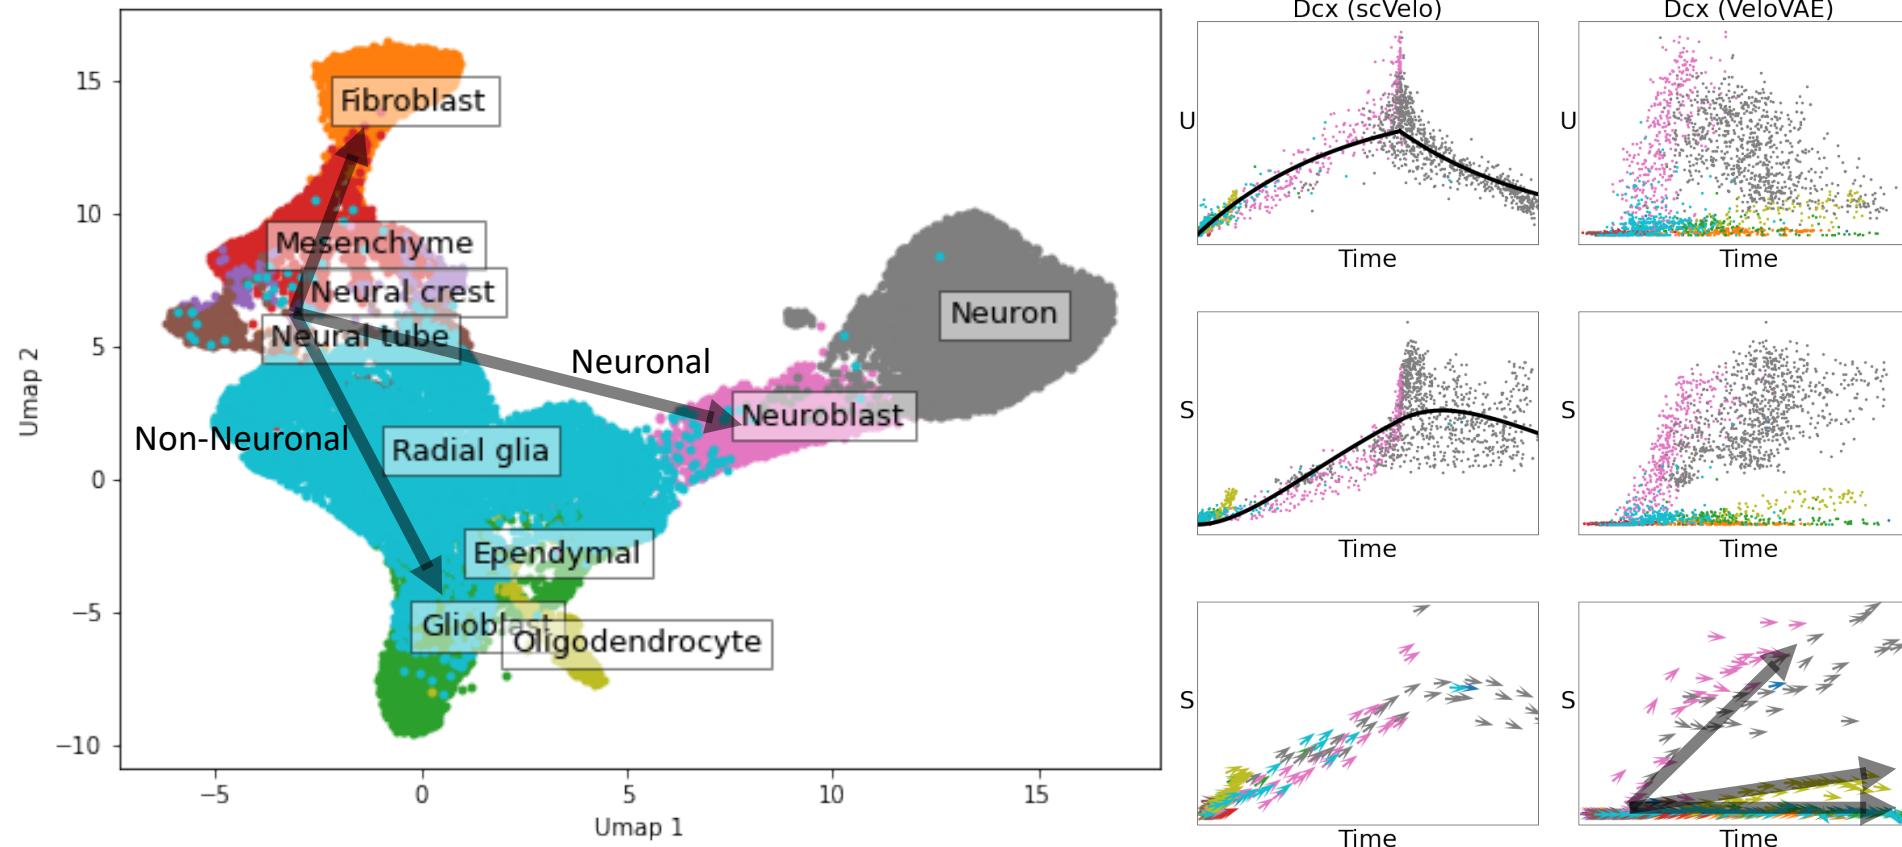

VeloVAE achieved a SOTA performance on data reconstruction.

Dataset	MSE		Time Correlation	
	scVelo	VeloVAE	scVelo	VeloVAE
Pancreas	2.107	<b>0.823</b>	N/A	N/A
Dentate Gyrus #1	0.670	<b>0.243</b>	N/A	N/A
Mouse Brain #1	10.160	<b>1.886</b>	N/A	N/A
Erythroid	0.873	<b>0.151</b>	-0.707	<b>0.855</b>
Dentate Gyrus #2	1.385	<b>0.159</b>	-0.158	<b>0.707</b>
Mouse Brain #2	18.19	<b>0.152</b>	-0.777	<b>0.897</b>

Table 1: Performance Comparison

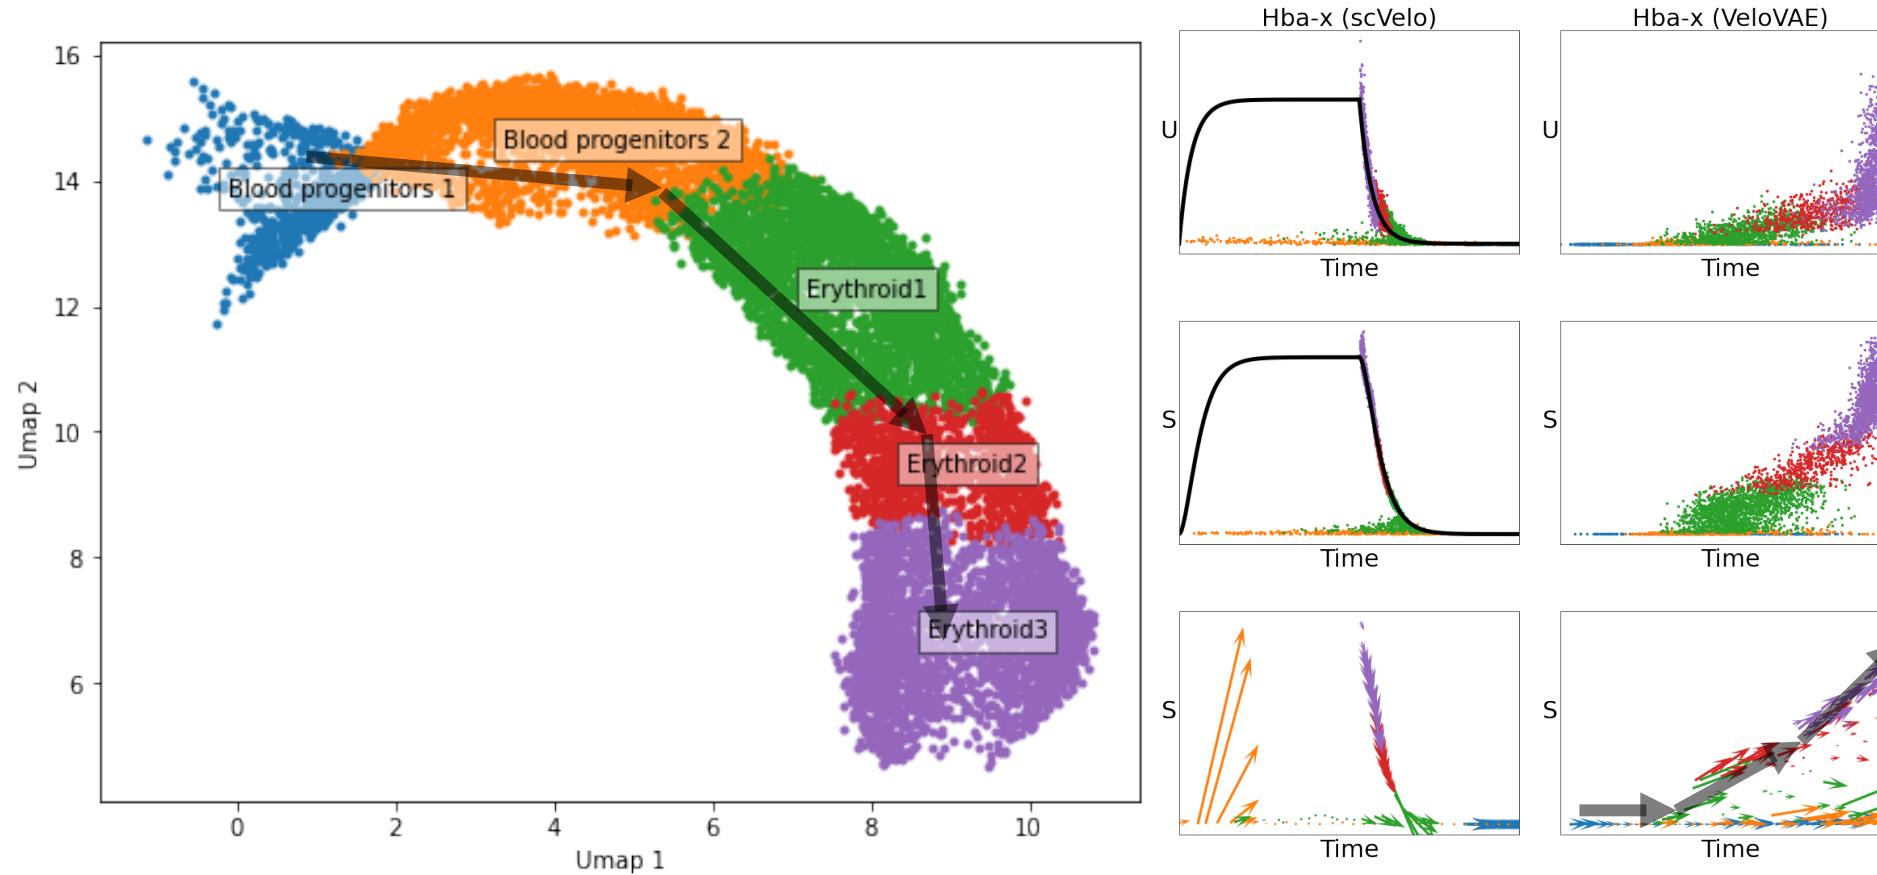

# Results – Mouse Brain

VeloVAE learns branching dynamics during differentiation.

# Results – Erythroid

VeloVAE identifies transcriptional boosts in erythroid lineage.

Thank you!

A large, semi-transparent white text 'Thank you!' is centered in the lower half of the slide. The background of the slide is a dark, grayscale photograph of a dense city skyline, likely Detroit, with various buildings and landmarks visible through the text.
